

Digital Edge

Compliance: SOC 2

Digital Edge provides a holistic 360-degree approach to achieving SOC 2 certification. Through collaboration with your internal key stakeholders, we identify gaps and establish the essential standards, policies, and procedures for data classification within your organization. Moreover, we offer customized technologies for AWS and Azure Public Cloud environments, guaranteeing optimal security and data privacy. With our team of subject matter experts leading the way, we navigate each step of the process seamlessly, delivering successful outcomes in a cost-effective and efficient manner.

SOC 2 is a voluntary compliance standard for service organizations, developed by the American Institute of CPAs (AICPA), which specifies how organizations should manage customer data. The standard is based on the following Trust Services Criteria: security, availability, processing integrity, confidentiality, and privacy. Digital Edge identifies the gaps and implements the standards, policies, and procedures that will govern data classification within your organization for SOC 2 certification. Our unique approach allows us to establish the standard to be naturally integrated into your environments without extra work or conflicts. We have an in-house staff of legal and auditing experts who will facilitate communication between internal and external compliance teams. A SOC 2 report is tailored to the unique needs of each organization. Depending on your specific business practices, each organization can design controls that follow one or more principles of trust. These internal reports provide organization for your regulators, business partners, and suppliers, with important information about how you organize your data.
