1. Executive Summary

eSpear LLC is a compliance and due-diligence SaaS provider for companies in the financial industry vertical. They had recently sought to increase their Oracle database capabilities in the AWS cloud environment.

2. Client Profile

Digital Edge has been providing IT services to eSpear LLC for more than 4 years, including their cloud management and optimization of business processes. With Digital Edge's assistance, eSpear LLC has greatly boosted their IT infrastructure capabilities and operational efficiency.

3. Solution

Together with Digital Edge, eSpear LLC architected, deployed, and configured Oracle Standard Instances in their AWS environment to optimize database administration and scaling. As eSpear LLC continues to scale, it is imperative that the company maintains the proper cloud infrastructure to handle the growing business needs.

4. Client's testimonial

"While we consider ourselves to be a sophisticated tech shop, Digital Edge's depth and expertise in AWS helped us implement a far more optimized workflow than we had originally constructed. Their highly seasoned engineers and CISSPs were able to distill in very clear terms the options we had to build out our system and the corresponding benefits and drawbacks of each. Additionally, their deep understanding of best practices in cybersecurity significantly improved our ecosystem. In fact, thanks to DE our AWS infrastructure is by far the most robust and flexible that it has been since our inception nearly 5 years ago." – *James Greenberg, Vice Chairman and CEO*
